

SabrEx™

ROOT INOCULANT

for CORN

SabrEx™ for CORN brings the benefits of ABM's™ **iGET™ Technology package** to your corn crop. It has been tested across the Midwest under a variety of field and fertility conditions. It has proven to increase yields an average of **8.53 bu/a** over a four year period.

SabrEx™ for CORN has been shown to:

- Create more robust root systems
- Increase water and nutrient efficiency
- Increase yields by more than 8.53 bu/a
- Induce resistance to plant stresses like dry weather

Call ABM™ at **1-877-617-2461** for more information or to find your nearest dealer.

SabrEX™

ROOT INOCULANT

for CORN

SabrEX™ is the next generation in a line of proven seed treatments for field crops from ABM™. The formulations are easy to use, while delivering impressive and profitable crop responses.

SabrEX™ for CORN is available in three formulations:

- PB is a low volume, talc/graphite based planter box treatment
 - HC is a pre-treatment applied by your seed company or seed dealer
 - LQ –A liquid product applied by your seed company or seed dealer.
- The LQ formulation can also be applied in-furrow.

Induced Gene Expression Triggers Technology, now formulated into several new products from ABM™. These products provide multifunctional and crop specific blends of beneficial strains of Trichoderma microbials – based on more than three decades of research at Cornell University and other international biological research programs. Their development is the latest result of screening more than 1,000 organisms from worldwide microbial libraries and selection/discovery programs, followed by hundreds of independent field trials around the world.

How does iGET™ Technology work? The proprietary and patent pending biologicals first colonize the crop root system. Their association with the plant induces gene expression and changes in plant physiology to enhance multiple biochemical pathways. Crop stresses such as dry weather can be alleviated, and often systemically – so that root colonization by the seed treatment can affect the physiology of the whole plant, even foliar/leaf biology.

ABM™ now offers several products for corn, wheat and soybeans that can:

- Create bigger root systems and plant growth
- Increase yields
- Induce resistance to plant stresses such as disease and drought
- Increase fertilizer and water use efficiency
